

MANUFACTURING/ASSEMBLY/WAREHOUSING/STORAGE YARD BUSINESS LICENSE APPLICATION SUPPLEMENT

The Lynnwood Wastewater Treatment Plant treats waste with biological organisms. Excessive amounts of oils, solvents, grease, metals or pesticides can seriously impair the organisms. Any business which discharges into the City storm or sanitary sewer system is subject to discharge limitations. An inspection of disposal and cleaning records and a review of business practices may result if discharge problems are traced to your business site. Penalties and sanctions may be imposed if prescribed discharge limitations are exceeded. If you would like information about the regulations or need help meeting the requirements, call **425.670.5221**.

You may be asked to produce records such as receipts for disposal services or cleaning services associated with storage of chemicals, flammables and wastewater pre-treatment activities. Please make certain you keep such records.

In addition to the above considerations involving the type of waste produced by your business, both the Lynnwood Fire Marshal's Office and Building Division need certain storage and processing information to be able to approve a building for a specific use. Accurately answering the questions below will facilitate the processing of your business license application.

	Yes	No
A. Welding or torch metal cutting?	<input type="checkbox"/>	<input type="checkbox"/>
B. Use compressed gases?	<input type="checkbox"/>	<input type="checkbox"/>
